

NIRAJAN KARKI

Curriculum Vitae — Aspiring Frontend Developer

Pokhara, Nepal | +977 9824148099 | nirajankarki5432@gmail.com | github.com/Nirajan2

PERSONAL PROFILE

Computer Science undergraduate entering third year at Informatics College Pokhara, with hands-on experience building React web applications and a solid foundation in Java, OOP, Python, and MySQL. Seeking a Frontend Developer internship to apply strong problem-solving skills, contribute to real-world projects, and grow as a professional developer. Comfortable working independently and collaboratively, with a track record of completing academic projects end-to-end — from design through deployment-ready code.

TECHNICAL SKILLS

Languages: Java (OOP), Python, JavaScript

Frontend: React, HTML5, CSS3, React Router, Context API

Database: MySQL

Tools & Concepts: Git/GitHub, REST API Integration, Responsive Design, Object-Oriented Programming

Data & Analytics: Power BI (data modeling, star schema, dashboard design)

EDUCATION

BSc (Hons) Computing — 2024 – Present (entering 3rd Year, 1st Semester, Sept 2026)

Informatics College Pokhara

Coursework in Java & Web Development, Object-Oriented Programming, Database Systems, and Data Analytics Tools (Power BI). Actively engaged in coding projects and practical assessments alongside coursework.

Higher Secondary Education (+2 Science) — 2021 – 2023

Pokhara United Academy

Specialized in Computer Science, Mathematics, and Physics, building a foundation in structured programming (C) and database management essentials.

Secondary Education Examination (SEE) — 2020

Pokhara United Academy

Completed schooling with high distinction.

KEY PROJECTS

E-Commerce Web Application | React, React Router, Context API, CSS, REST API

- Built a full-featured online store with product listings, cart, and checkout flow using React and React Router.
- Refactored prop-drilled state into a centralized CartContext for cleaner, scalable state management.
- Implemented cart persistence with localStorage and added form validation across checkout steps.
- Fixed responsive layout issues in the checkout grid and added inline SVG fallbacks for broken product images.

Art Gallery Management System | Java, OOP

- Designed and developed a Java-based management system applying core OOP principles (encapsulation, inheritance, polymorphism).
- Modeled gallery and collection data and implemented CRUD operations for artwork records.
- Created multi-page prototypes (Collection and Gallery pages) with interactive features based on real-world UX references.

Art Gallery Webapp | Java, JSP, MVC Architecture, MySQL

- Built a web-based art gallery application following the MVC (Model-View-Controller) architecture to separate data, presentation, and business logic.
- Used Java and JSP for the Controller and View layers, rendering dynamic gallery and collection pages.
- Connected the Model layer to a MySQL database to store and retrieve artwork, artist, and collection records, with CRUD operations for both user-facing browsing and admin-side management.

Smart Home Automation System / *IoT, Python*

- Developed a Python-based prototype to monitor and control home appliances remotely using sensor input.
- Implemented logic to automate device states (on/off/threshold triggers) based on real-time sensor data.

Billing System / *Python*

- Built a console-based billing application in Python to generate invoices with automated price and tax calculations.
- Structured the program using functions and data structures to manage item records and generate itemized bills.

CERTIFICATIONS & TRAINING

- Power BI Practical Assessment — built a full retail analytics dashboard (data cleaning, star schema modeling, 15+ visuals across four report pages).
- Python Automation — coursework covering script structuring, automation tasks, and data processing.

ACHIEVEMENTS

- 4th Place, Web Dev Hackathon — collaborated with a team of three to build a web app.
- Consistently passed semesters with good academic standing at Informatics College Pokhara.
